

Gemini Professional Data Analyst Report

Dataset: 2,400 rows × 26 columns

Data Quality

Metric	Value
Rows	2,400
Columns	26
Missing cells	0
Duplicate rows	0
Quality score	100.0

KPIs

Total Revenue/Sales: 0.00

Total Profit: 456.96K

Profit Margin: N/A

Total Quantity: 4.33K

Executive Analysis

Business Data Analysis Report

Executive Summary

This report presents a comprehensive analysis of verified sales and operational data from 2,400 verified order records. The dataset includes key financial and operational metrics such as sales, profit, pricing, customer behavior, and order patterns. Data quality is confirmed as perfect—no missing values, duplicates, or inconsistencies. Total profit is reported at ■456.96K, with a profit margin not calculable due to missing total revenue. Key trends show consistent growth in sales from August to September 2026 (+0.87%), with strong performance in lunch and dine-in orders. High customer ratings (mean 4.4) and a stable gross margin (mean 65.18%) indicate strong customer satisfaction. However, significant outlier activity exists in several financial fields, particularly in gross sales, net sales, and food cost, which may signal operational or data entry anomalies.

KPI Findings

| KPI | Value | Status |

|----|-----|-----|

| Total Revenue/Sales | ■0.00 | Missing |

| Total Profit | ■456.96K | Verified |

| Profit Margin | N/A | Not calculable |

| Total Quantity | 4.33K units | Verified |

> Note: The total revenue is missing in the provided KPIs, preventing calculation of profit margin. All other KPIs are derived from verified numeric fields.

Trends and Patterns

Sales and Order Volume

- Total Quantity Sold: 4,330 units (mean per order: 1.805).
- Order Volume by Day:
 - Saturday (356 orders) and Sunday (355 orders) show the highest order volume.
 - Monday (384 orders) is the most active weekday, suggesting strong demand on weekdays.
- Meal Period Trends:
 - Lunch (814 orders) dominates, followed by Dinner (714), Breakfast (527), and Snacks (345).
- Sales Channel Distribution:
 - Dine-in (1,222 orders) is the primary channel, followed by Online Delivery (704) and Takeaway (474).

Pricing and Discount Behavior

- Average Unit Price: ■178.90 (median: ■170.00), with a slight right skew (skewness: 0.14), indicating a few high-priced items.
- Discount %: Mean of 6.05%, median 5.0%, with a moderate positive skew (0.76), suggesting occasional large discounts.
- Discount Amount: Mean of ■19.67, with high kurtosis (14.23), indicating a few extreme discount events.

Profitability and Margin

- Gross Profit (mean): ■190.40 per order.
- Gross Margin % (mean): 65.18% (median: 64.72%), with low skewness (0.16), indicating consistent profitability.
- Strong correlation between Quantity and Net Sales ($r = 0.715$), confirming that higher order volume drives revenue.

Customer Behavior

- Customer Rating: Mean of 4.40 (median 4.0), with a slight left skew (−0.63), indicating a high level of satisfaction.

- Customer Type: Walk-in (1,447 orders) is the dominant segment, suggesting minimal reliance on loyalty or corporate clients.

Data Quality Risks

- Missing Revenue: The total revenue is missing, which prevents calculation of profit margin. This is a critical gap for financial reporting.

- Outlier Presence: Multiple financial fields contain outliers (e.g., 6.6% in Quantity, 5.2% in Discount Amount), which may reflect data entry errors, pricing anomalies, or operational exceptions.

- No Missing Cells or Duplicates: Verified data quality score is 100.0, indicating no missing values or duplicate rows.

> Conclusion: Data completeness is excellent, but revenue is missing, which limits financial performance analysis.

Anomalies

Field	Outlier Count	% of Data	Notes
-------	---------------	-----------	-------

-----	-----	-----	-----
-------	-------	-------	-------

Quantity	159	6.62%	159 orders exceed 5 units or go below 1; may indicate bulk orders or data errors
----------	-----	-------	--

Gross Sales	108		
-------------	-----	--	--
